

ASPOZIN[®]-10

(Dapagliflozin 10 mg)

Dapagliflozin is a medicine is mainly used to treat type 2 diabetes.

Sometimes it can be used together with insulin to treat type 1 diabetes. Dapagliflozin is usually prescribed for type 2 diabetes if you cannot take metformin.

- Dapagliflozin works on kidneys.
- Dapagliflozin does not make you put on weight.
- Dapagliflozin can be combined with other diabetes medicines.

ASPOZIN[®]-M
(Dapagliflozin 10 mg + Metformin 500 mg SR)
